

# CLEAR PATH

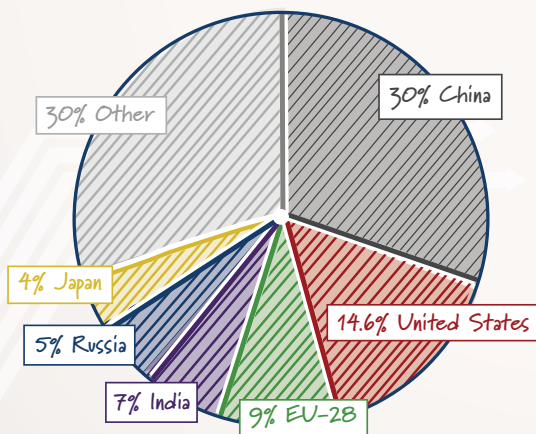

ClearPath works to accelerate conservative, market-based clean energy innovation. The U.S. has an enormous role to play in the global energy picture. With strategies focused on affordably meeting growing global demand for reliable and clean energy, we want the next generation of technologies to be created in America.

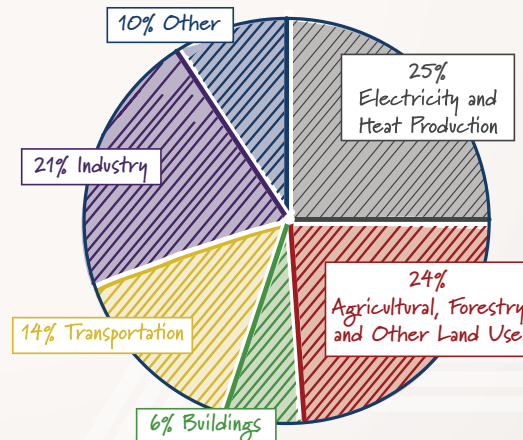

ClearPath works to advance next generation innovation for nuclear power, carbon capture for natural gas or coal, energy storage, hydropower and geothermal. These technologies are essential to quickly and affordably reducing CO2 emissions across sectors of the global economy.

The U.S. is 14.6% of Global Emissions

Emissions by Economic Sector

## Mission Statement

ClearPath's mission is to develop and advance conservative policies that accelerate clean energy innovation. To advance that mission, we develop cutting-edge policy and collaborate with academics and industry. An entrepreneurial, young, strategic nonprofit, ClearPath (501(c)(3)) partners with in-house and external experts on nuclear, carbon capture, hydropower, natural gas, energy storage, geothermal and energy innovation to advance our mission.
